Resident introduces Radio by Tim Rundle

Resident is pleased to introduce Radio, a refined timber seating collection designed by Tim Rundle. Crafted from solid oak with a lightweight frame, the Radio Chair and Stool build on the success of Rundle's earlier Bloom collection, while introducing a new language of comfort and strength.

Designed with a performance mindset, Radio expresses precision and restraint through carefully constructed details. The slender legs are angled outwards, against the forces experienced during sitting, allowing the design to maintain an elegant silhouette without compromising on strength. Subtle shifts in proportion, including both a wider and higher backrest, provide extra support, allowing each piece to feel enveloping without appearing heavy.

“This chair felt like a natural fit for Resident. A well-made timber chair is essential for any furniture company, and when sourced responsibly and used sparingly, timber is a highly sustainable material. The frame's design is light yet strong, making it suitable for a variety of environments. It's particularly ideal for high-traffic spaces where products are put to the test”

Made from solid oak with a moulded plywood backrest and an optional upholstered seat pad, the chair and stool are available in natural or black finishes with the chair stackable up to four high.

Versatile in application, Radio suits both residential and commercial settings.
